BRIDGING SAN FRANCISCO BAY METROPOLITAN AREA

This bridge is a double deck structure eight and one quarter miles long. The upper deck is 58 feet wide divided into six auto lanes. The lower deck will carry three auto truck lanes and two interurban car tracks. The entire project cost $79,500,000.00, the bridge proper $57,500,000.00, and was opened for traffic in 1937. Main suspension spans are 2320 feet in length with a vertical clearance of 185 feet. The night lighting makes it almost as brilliant as day.
